
Appendix B – Statuses to be used in MESSAGE_STATUS element:

Note: This Appendix will be updated continuously

STATUS_ID	STATUS_DESCRIPTION
100	STATUS_MSG_ACCEPTED
300	STATUS_USER_DOESNT_EXIST
301	STATUS_INVALID_PASSWORD
302	STATUS_COUNTRY_NOT_SUPPORTED
303	STATUS_MESSAGE_DEVICE_LIMIT_EXCEEDED
304	STATUS_MESSAGE_LIMIT_REACHED
305	STATUS_NOT_ENOUGH_CREDIT
306	STATUS_QUOTA_LIMIT_REACHED
307	STATUS_USER_CANNOT_FORWARD
308	STATUS_USER_CANCELED
309	STATUS_USER_SUSPENDED
310	STATUS_MESSAGE_MUST_CONTAIN_AT_LEAST_ONE_DESTINATION
311	STATUS_MESSAGES_INDEXES_NOT_SEQUENTIAL
400	STATUS_GENERAL_ERROR
401	STATUS_XML_VALIDATION_ERROR

Appendix C – Response Statuses:

Note: This Appendix will be updated continuously

RESPONSE_STATUS	RESPONSE_STATUS_DESC
1000	DELIVERED
2000	SUCCESS
3000	PENDING
4000	FAILED
5000	CANCELED

Appendix D – Java Code:

1. Post XML

This is a sample application that demonstrates how to send a message through TeleMessage's xml interface from your java code.

The application posts XML file* (that represent a message) located on your local disk to our servers and get response about the sent message.

The response includes message-id and message-key for tracing message delivery.

```
import java.io.*;
import java.io.FileInputStream;
import javax.mail.internet.MimeUtility;
import org.apache.commons.httpclient.HttpClient;
import org.apache.commons.httpclient.methods.EntityEnclosingMethod;
import org.apache.commons.httpclient.methods.PostMethod;

public static void main (String[] args) {
    try {
        // Get target URL
        String strURL = "http://xml.telemessage.com/partners/xmlMessage.jsp";
        InputStream xmlin =null;
        */Send xml file (read a local xml file and send it)
        String strXMLFilename = "add your file path here" ;
        File input = new File(strXMLFilename);
        xmlin = new FileInputStream(input);
        //Prepare HTTP post
        PostMethod post = new PostMethod(strURL);
        //Request content will be retrieved directly
        /// from the input stream
        post.setRequestBody(xmlin);
        //Per default, the request content needs to be buffered
        // in order to determine its length.
        // Request body buffering can be avoided when
        // = content length is explicitly specified
        // = chunk-encoding is used
        if (input.length() < Integer.MAX_VALUE) {
            post.setRequestContentLength((int)input.length());
        } else {
            post.setRequestContentLength(EntityEnclosingMethod.CONTENT_LENGTH_CHUNKE
D);
        }
        //Specify content type and encoding
        // If content encoding is not explicitly specified
        // ISO-8859-1 is assumed
        post.setRequestHeader("Content-type", "text/xml; charset=ISO-8859-1");
        //Get HTTP client
        HttpClient httpclient = new HttpClient();
        //Execute request
    }
}
```

```

        int result = httpClient.executeMethod(post);
        //Display status code
        System.out.println("Response status code: " + result);
        //Display response
        String responseStr = post.getResponseBodyAsString();
        System.out.println("Response body: ");
        System.out.println(responseStr);
        //Release current connection to the connection pool once you are done
        post.releaseConnection();
    } catch (Exception e) {
        System.out.println(e.getMessage());
    }
}

```

* You can enter your string directly (instead of reading the file from your local disk) just replace the 3 lines under 'Send xml file' section to:

```

String input = "add your string here";
xmlin = new ByteArrayInputStream(input.getBytes())

```

2. Message with attachment

In order to send message with file attachment you should encode your file to [base64 encoding](#).

The following application demonstrate how to read a file located on your local disk, encode it to base64 and write the encoded file as a new file.

```

import java.io.*;
import javax.mail.internet.MimeUtility;

public static void main(String[] args) {
    //initialize input and output file name
    String strInputFileName = "enter file name (to encode) here";
    String strOutputFileName = "enter output file name here";
    rawFileToBase64 (strInputFileName,strOutputFileName);
}

public static boolean rawFileToBase64 (String inFile, String outFile) {
    try {
        // initialize inputFile
        FileInputStream fin = new FileInputStream(inFile);
        BufferedInputStream bis = new FBufferedInputStream(fin);
        // initialize outputFile
        FileOutputStream fos = new FileOutputStream(outFile);
        OutputStream os = MimeUtility.encode(fos,"base64");
        BufferedOutputStream bos = new BufferedOutputStream(os);
        byte data[] = new byte[1024];
        int len;
        // read the buffered stream
        while(bis.available(>0) {
            len = bis.read(data);
            bos.write(data,0,len);
        }
        bos.close();
        bis.close();
    }
}

```

```

    } catch (Exception e) {
        System.out.println("Unable to encode the contents of the request file."+ e);
    }
}

```

3. Message in other language

In order to send message in other language the text encoding should be '**UTF-8**'.

The following application demonstrate how to read a file located on your local disk, encode it to 'UTF-8' and write the encoded file as a new file.

```

import java.io.*;
public static void main(String[] args) {
    try {
        //encode inputFile to UTF-8 and write the encoded file to outputFile
        //assumption: the input file encoding is same as the file system default character-encoding,
        //To specify an encoding other than the default, you should change
        // 'System.getProperty("file.encoding")' to your file encoding.
        convertFileEncoding ( "input file path", System.getProperty("file.encoding"),"output file path",
            "UTF8");
    } catch(Exception e) {
        System.out.println("Unable to encode the contents of the request file."+ e);
    }
}

public static void convertFileEncoding (String sourcefile, String inEncoding,String outfile, String outEncoding) {
    // initialize
    InputStream input = null;
    OutputStream out = null;
    try {
        //Read sourcefile
        File infile = new File(sourcefile);
        input = new FileInputStream(infile);
        int bufLength = (int)infile.length();
        byte[] bytes = new byte[bufLength];
        input.read(bytes, 0, bufLength);
        String s = new String(bytes, inEncoding);
        //Write outfile
        out = new FileOutputStream(new File(outfile));
        bytes = s.getBytes(outEncoding);
        out.write(bytes, 0, bytes.length);
    } finally {
        if (input != null)
            input.close();
        if (out != null)
            out.close();
    }
}
}

```

Appendix E – Visual Basic Code:

1. Post XML

This is a sample module that demonstrates how to send a message through TeleMessage's xml interface from your visual basic code.

The module posts XML string (that represents a message) to our servers and get response about the sent message. The response includes message-id and message-key for tracking message delivery.

Note: The module references the MSXML library, therefore you should add reference to 'Microsoft XML, version 2.0'.

```
Sub main()  
    Dim objHTTP As New MSXML.XMLHTTPRequest()  
    Dim strMessage As String  
    Dim strReturn As String  
    Dim objReturn As New MSXML.DOMDocument()  
    Dim dblTax As Double  
    Dim strQuery As String  
    'Create the string to send  
    strMessage = "enter your XML message here"  
    'Set up to post to our server  
    objHTTP.open("post", "http://xml.telemessage.com/partners/xmlMessage.jsp", False)  
    'Set a standard XML header for the content-type  
    objHTTP.setRequestHeader("Content-Type", "text/xml")  
    'Send the message  
    objHTTP.send(strMessage)  
    'Get the return response  
    strReturn = objHTTP.responseText  
    'Load the return response into a DOM  
    objReturn.loadXML(strReturn)  
    'Write the return response  
    Console.WriteLine(strReturn)  
End Sub
```

Appendix F – PHP Language Code:

1. Post XML

This is a sample application that demonstrates how to send a message through TeleMessage's xml interface from your PHP code.

The application posts XML (that represent a message).

The response includes message-id and message-key for tracing message delivery.

Note:

1. PHP must be run with curl extension. For more information, visit <http://www.php.net/manual/en/ref.curl.php>
2. You can parse XML by using DOM extension in PHP5 (<http://www.php.net/manual/en/ref.dom.php>) and DOMxml extension in PHP4 (<http://www.php.net/manual/en/ref.domxml.php>).

```
<?php  
/**  
 * Sends xml message to TeleMessage's xml interface  
 * @param $xmlstring – string contains TeleMessage xml  
 * @return string that contains response xml from TeleMessage's xml interface  
 * @exception Exception if sending failed.  
 */
```

```

function sendToTeleMessage($xmlstring){
    $post_data = array( "xmlMessage=" . $xmlstring );

    //creating header for http post request
    $myHeader = array(
        "MIME-Version: 1.0",
        "Content-type: text/xml; charset=utf-8"
    );
    //creating and initiating curl
    $ch = curl_init();
    //setting curl/http headers
    curl_setopt($ch, CURLOPT_POST,1);
    curl_setopt($ch, CURLOPT_POSTFIELDS,$str);
    curl_setopt($ch, CURLOPT_URL," http://xml.telemessage.com/partners/xmlMessage.jsp ");
    curl_setopt($ch, CURLOPT_SSL_VERIFYHOST, 2);
    curl_setopt($ch, CURLOPT_RETURNTRANSFER,1);
    curl_setopt($ch, CURLOPT_SSL_VERIFYPEER, false);
    //executing http request and getting response. $postResult will contain response xml from TeleMessage.
    $postResult = curl_exec($ch);
    if (curl_errno($ch)) {
        // you can return null for both PHP4 and PHP5
        return null;
        /*
        * for PHP5 you can throw Exception:
        * throw new Exception("Error while sending");
        */
    }
    curl_close($ch);

    return $postResult;
}
?>

```

Appendix I – Device Status description table

Status	Description
0	Message not delivered yet
1	Message re-scheduled by the system
1000	Message has been sent
1100	Email was delivered
1200	Fax has been sent
1400	Call has been made
1401	Not confirmed by recipient
1402	Call reached a voice mail - message left on voice mail system
1500	SMS successfully sent
1501	SMS successfully sent

Status	Description
2417	Call completed successfully
2418	Call completed successfully
2500	SMS was delivered with confirmation
2501	SMS was delivered to handset
2500	MMS was delivered
3000	Message delivery in progress
3001	Message delivery in progress: No MessageSender Server available
3002	Message delivery in progress: MessageSender was busy
3003	Device is about to be re-sent
3100	Message Delivery failed

1502	Mobile not reachable or it's memory capacity exceeded (SMS may not be delivered)
