APIs for SMS Text Messaging, IP Push Notifications, Voice & More

TeleMessage's APIs enables businesses to fully automate messages and processes with interactive text and voice communications, including real-time message delivery to wireless & wired devices, including mobile and landline phones, fax machines, and e-mail exchange systems.

TeleMessage provides a range of protocols necessary to bring your enterprise software applications into continuous interaction with a multitude of devices.

TeleMessage offers dynamic integration and implementation options that can easily integrate with your current systems on a one-way or two-way basis.

Simple & reliable messaging—reach anyone, anywhere:

- **Multi-Channel Delivery:** communicate with your customers, employees & partners through multiple devices including, mobile & landline phones, fax machines, SMS and e-mail exchange. You can even send chasing messages with escalation rules.
- **Seamless Integration:** use our APIs including REST, SOAP, XML, HTTP, SMTP & SMPP to send and receive all messages in a secure manner maintaining authorized access, user privacy and data protection.
- **Interactive Response:** Customers can interact with the system and return numeric, textual or voice replies. You can also send voice interactive SMS messages with a callback to a virtual call center via IVR.
- **Dynamic Content:** Send voice, text, image or interactive messages with varying data. Incorporate a one-to-one personalized touch. You can even use multilingual alerts – so each recipient will get the care they expect.
- **Track Delivery:** Get real time reports on the status of message alerts, their delivery and user responses.
