

FEATURES LIST

SECURE

Feature	Description
Secure text messaging & file sharing (pictures, videos, documents, etc)	User accounts managed by an administrator can send secure and encrypted messages to other users within the organization.
End-to-End Encryption	Our application adds an encrypted delivery layer for end-to-end protection, throughout transport, on the device and in the database. Our solution enables ciphers including AES and TLS among others.
PIN Codes	Users can be forced to set a PIN code to unlock the application. Administrators can decide how often employees need to input the PIN, either upon device screen lock or device inactivity.
Self-Destructing Messages	Administrators can set a time limit for how long recipients can view a message which then is deleted once the time limit has been reached.
Remote Lock & Wipe	In case of a lost, stolen, or compromised device, the administrator can ensure remotely lock the device and remotely wipe all data.
Forward Locking	Restrict users from forwarding messages to users outside of the Active Directory.
Deletion Restrictions	The company administrator can determine whether users can delete or disable the application.

MANAGED

Central Management	Manage employee access to TeleMessage; add, suspend or delete users, and import multiple users at the same time.
Message Archiving	Identify, collect and archive inbound and outbound messages to establish internal policies, monitor activity and comply with external regulatory bodies & audits. TeleMessage can also archive text messages sent & received outside of the app via Virtual Number.
Policy Enforcement	Set mobile messaging policies including permissions, allowed devices, fallback from IP to SMS, security features, archiving and service levels.
Reporting Tools	Get real-time usage reports, statistics and trends according to various criteria such as message type or user history.
My Company Address Book	The platform include active directory integration and a centralized address book, contact lists and groups to facilitate and simplify communication.
Connect All Employees	All employees can use the app, whether they are in the office or in the field.
Group Messaging	Multiple users can chat at the same time with no limit to the number of groups that can be created; every group has an admin which can add or remove participants; users can stay or leave groups as they wish.

RELIABLE

SMS Fallback	In case users' data coverage or Wifi doesn't work, IP Push Notifications will be delivered as SMS messages ensuring delivery of messages in a timely manner.
Message Confirmation	Users are notified when messages sent, delivered, read, or deleted in real-time. Message delivery can also be tracked through the web.
Multi-Channel Delivery	TeleMessage delivers all kinds of messages: IP Push Notifications, SMS, voice (pre-recorded voice messages or text-to-speech), fax and email.
High Availability	Our carrier-grade infrastructure ensures that you can continue to work without worry of interruption as we guarantee high availability with 99.9% SLA uptime.
Cross Carrier & Cross Device Compatibility	TeleMessage communicates across devices and platforms. Just send the message and our platform will determine the best means of delivery. Our application runs on both Android and iOS devices.
International Message Transmission	We provide worldwide coverage of SMS and voice message termination. With more than 100 operators in over 200 countries, your message will reach virtually any mobile subscriber worldwide.

IT READY

SDK for Android & iOS	The TeleMessage SDK for Android & iOS enables developers & enterprises to integrate secure text messaging technology into other apps and software.
Chat View (2017)	Users can send text messages directly from their desktops, just as they would on their phone. The chat view feature replicates the look and feel of the app on their desktop.
Secure Voice Calls (2017)	Users can call other users through the app over data or Wifi via Web RTC technology.
APIs	Integrate IT or operational systems with TeleMessage using our APIs: REST, SOAP, XML, HTTP, SMPP, SMTP and more.
Resources & Documentation	We've created a dedicated Developer's Zone entirely for developers with code samples and API documentation.
