# Android Archiver Activation Procedure

1. To register and start using the Android archiver, your administrator must open up an account for you.
2. Once he opens up an account and activates your phone you will receive an SMS text message., coming from a system number or your administrator number dependent on the system configuration.

Your company's administrator has opened an account for you. Download the app and start messaging: https://www.telemessage.com/downloadaa/	It might also have a slightly different text than the one that you see here. Once you get this message you can click on the Android archiver download link

   [Alternatively search for *telemessage android archiver* in the play store

3. The link takes you to Google Play, where you click **Install** .
   [In some companies this app might be deployed on your screen by your company's administrator.]
4. Accept the installation terms.
5. Perform the directed one-time activation process. During this process you will have to enter your mobile number which in most cases will be detected by the app.
6. After you sign in and activate the app our system will verify that you have this phone by sending a text message to your phone and automatically activating it:

Messages 10:58

+14343220215

TeleMessage activation code : 1750

To activate call recordings

By default the Android archiver is recording all unique text communication meaning SMS and MMS sent and received through the Android native messaging client. To activate call recordings:

1. Click the Settings gear:
2. Toggle: **Enable Call Recording**:

3. Accept the terms telling you that all your calls are being recorded and uploaded to the company archive:

Once this is done you're ready to record your calls.
